```

```
Set hybridBodies = part.HybridBodies
```

```
hybridBodies.Add
```

```
...
```

Automating Geometric Operations

You can perform operations like extrusions, cuts, and fillets.

Example: Extruding a profile

```
``vba
```

```
' Assumes a profile sketch exists
```

```
Dim shapeFactory As ShapeFactory
```

```
Set shapeFactory = part.ShapeFactory
```

```
Dim pad As Pad
```

```
Set pad = shapeFactory.AddNewPad(profile, 10) ' Extrude by 10 units
```

```
```
```

## Step-by-Step Guide: Creating a Simple Cube in CATIA Using VBA

```

```
Sub CreateCube()
```

```
Dim CATIA As Application
```

```
Set CATIA = GetObject(, "CATIA.Application")
```

```
' Add a new part document
```

```
Dim partDoc As PartDocument
```

```
Set partDoc = CATIA.Documents.Add("Part")
```

```
Dim part As Part
```

```
Set part = partDoc.Part
```

```
Dim factory As ShapeFactory
```

```
Set factory = part.ShapeFactory
```

```
' Create a cube of 50mm size
```

```
Dim cube As Box
```

```
Set cube = factory.AddNewBox(50, 50, 50)
```

```
' Update the part
```

```
part.Update
```

```
End Sub
```

```
...
```

### Step 3: Run the Macro

- Save the macro.
- In CATIA, run the macro via `Tools` > `Macros` > `Macros...`
- Select your macro and click `Run`.

### Outcome

A new part with a 50x50x50 mm cube appears in CATIA.

## Advanced Techniques and Best Practices

### Working with Parameters and Constraints

To make models parametric:

- Define parameters for dimensions.
- Use VBA to modify parameter values.
- Update the model to reflect changes.

Dim parameters As Parameters
```

```
Set parameters = part.Parameters
```

```
Dim param As Parameter
```

```
Set param = parameters.Item("D1")
```

```
param.Value = 100 ' Change dimension to 100 mm
```

```

Dassault Systèmes' CATIA (Computer-Aided Three-dimensional Interactive Application) is a leading CAD software used by industries ranging from aerospace to automotive to shipbuilding. One of its powerful features is the integration of Visual Basic for Applications (VBA), allowing users to automate repetitive tasks, customize workflows, and extend the software's capabilities. This article provides a comprehensive Catia VBA tutorial, guiding both beginners and seasoned users through the essentials of scripting within CATIA to enhance productivity and innovate design processes.

## Understanding the Basics of CATIA VBA

### What is VBA in CATIA?

VBA (Visual Basic for Applications) is a programming language developed by Microsoft that is embedded within many Office applications and compatible with other software like CATIA. In CATIA, VBA enables users to create macros—small programs that automate tasks, manipulate geometries, generate reports, and interface with other software. The VBA environment in CATIA is accessible via the built-in macro recorder and editor, making it easier for users to get started with automation without deep programming knowledge.

### Why Use VBA in CATIA?

- Automation of Repetitive Tasks: Automate routine modeling, drawing, or data management activities.
- Customization: Develop tailored tools and interfaces suited to specific engineering workflows.
- Data Extraction and Reporting: Generate reports, extract parameters, or export data efficiently.
- Integration: Interface CATIA with other software or databases for seamless workflows.

### Prerequisites for a Successful VBA Tutorial

- Basic familiarity with CATIA interface and operations.
- Familiarity with programming concepts is helpful but not mandatory.
- Access to CATIA with VBA enabled (most standard installations include this).
- Some understanding of Visual Basic syntax and logic.

## Getting Started with CATIA VBA: Setting Up the Environment

### Accessing the Macro Editor

To begin scripting in CATIA, you need to access the macro environment:

- Open CATIA and navigate to the 'Tools' menu.
- Select 'Macros' and then 'Macros...' from the dropdown.
- In the 'Macros' dialog box, click 'Create...' to start a new macro.
- Choose 'VBA' as the language and give your macro a name.
- Click 'Create' to open the VBA editor (Microsoft Visual Basic for Applications IDE).

## Understanding the VBA IDE in CATIA

The VBA IDE provides an interface similar to that of Excel or Word:

- Project Explorer: Displays your open projects and modules.
- Code Window: For writing and editing code.
- Immediate Window: Testing expressions or debugging.
- Properties Window: Viewing or editing object properties.

## Basic Macro Structure

A simple VBA macro in CATIA typically has the following structure:

```
``vba

Sub MyFirstMacro()

' Declare variables

Dim product As Product

' Set the product to the active document

Set product = CATIA.ActiveDocument.Product

' Perform actions, e.g., display a message

MsgBox "Hello from CATIA VBA!"

End Sub
```

...

This template can be expanded to automate complex tasks.

## Core Concepts and Techniques in CATIA VBA

### Accessing CATIA Objects

At the heart of CATIA VBA scripting is understanding how to access and manipulate objects within the application. The primary object is ``CATIA``, which represents the application itself. From there, you navigate to documents, products, parts, features, and parameters.

- `ActiveDocument`: Refers to the currently open document, such as a product or part.
- `Products and Parts`: Use ``ActiveDocument.Product`` or ``ActiveDocument.Part`` to access the geometry.
- `Selections`: You can select objects within CATIA to manipulate or analyze.

### Common Operations in VBA

- `Creating and Modifying Geometry`: Automate the creation of points, lines, surfaces, and features.
- `Parameter Management`: Read or update parameters within parts or assemblies.
- `File Operations`: Save, close, or export documents via scripts.
- `Iterating through Collections`: Loop through features, bodies, or parameters.

### Example: Extracting Parameters from a Part

```
``vba
```

```
Sub GetParameterValue()
```

```
Dim partDoc As PartDocument
```

```
Dim part As Part
```

```
Dim parameters As Parameters
```

```
Dim param As Parameter
```

```
Set partDoc = CATIA.ActiveDocument

Set part = partDoc.Part

Set parameters = part.Parameters

For Each param In parameters

Debug.Print param.Name & ": " & param.ValueAsString

Next

End Sub

'''
```

This script lists all parameters in the active part document in the Immediate window.

## Practical CATIA VBA Scripts and Tutorials

### Automating a Basic Part Creation

One of the first projects for VBA beginners is automating the creation of a simple part with predefined dimensions.

Steps:

- Open a new part document.
- Use VBA to create a sketch, draw a rectangle, and extrude it into a solid.
- Save the part with a custom name.

Sample Snippet:

```
```vba

Sub CreateSimpleBlock()

Dim partDoc As PartDocument

Dim part As Part
```

Dim bodies As Bodies

Dim partBody As Body

Dim sketches As Sketches

Dim sketch As Sketch

Dim factory As Factory2D

Dim pad As Pad

Set partDoc = CATIA.Documents.Add("Part")

Set part = partDoc.Part

Set bodies = part.Bodies

Set partBody = bodies.Add()

Set sketches = partBody.Sketches

' Create a new sketch on XY plane

Set sketch = sketches.Add(part.OriginElements.PlaneXY)

Set factory = sketch.OpenEdition()

' Draw rectangle

factory.CreateLine 0, 0, 50, 0

factory.CreateLine 50, 0, 50, 30

factory.CreateLine 50, 30, 0, 30

factory.CreateLine 0, 30, 0, 0

sketch.CloseEdition

' Pad (extrude) the rectangle

```
Set pad = part.ShapeFactory.AddNewPad(sketch, 20)
```

```
part.Update
```

```
End Sub
```

```
'''
```

This script automates the creation of a simple rectangular block.

Batch Processing and Data Management

VBA can be used to process multiple files, update parameters across assemblies, or generate reports. Techniques include:

- Looping through files in directories.
- Updating parameters based on external data sources.
- Exporting geometry or attribute data to Excel or text files.

Creating User Interfaces

Advanced users can develop custom forms and dialog boxes within VBA to make scripts user-friendly. These interfaces can allow users to input dimensions, select options, or trigger specific tasks without editing code.

Best Practices and Tips for Effective CATIA VBA Programming

- Start Simple: Begin with small scripts to automate basic tasks.
- Use the Macro Recorder: Record your actions to generate initial code snippets, then refine and customize.
- Comment Your Code: Write clear comments to explain logic, making maintenance easier.
- Debugging: Use the Immediate window and breakpoints to troubleshoot issues.
- Leverage the API Documentation: Dassault provides detailed documentation on CATIA's automation API.
- Backup your work: Keep copies of your scripts before making significant changes.

Advanced Topics for Power Users

- Interfacing with Excel: Automate data exchange between CATIA and Excel for parametric control and reporting.
